**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Clark et al. US Pat. 4,612,424.

Clark et al. US Pat. 4,612,424 teaches a secure operation mechanism for electrical shutdown device comprising:

a secondary handle 280 (please see fig. 30);

control shaft 108;

a locking mechanism 132 attached to the control shaft to be mobile between a locked position and an unlock position (direction 134 in fig. 30).

***Allowable Subject Matter***

3. Claims 2-8 and 10-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2832

Claims 2 and 10 recite "said locking mechanism is positioned in order to move from said locked position to said unlocked position by performing a manual action on said secondary handle to move said control shaft along direction P over a predetermined distance at least equal to C and to return from the unlocked position to the locked position automatically through the action of a return mechanism acting on said control shaft." Claims 3-7 and 11-15 depend on claims 4 and 12, respectively.
